

The bar chart below shows the percentage of people using different modes of transport to travel to and from work in one European city in 1960, 1980 and 2000.

Summarize the information by selecting and reporting the main features and make comparisons where relevant.

题目分析：

这个图是柱状图，动态图，1960-2000。

描述对象：the percentage of people using different modes of transport

单位：%

时态：过去时

Overview：两个比较维度：趋势：bus, bike, foot 的比例在不同程度上下降；car 的比例上升。大小：car 的比例最终最高。

段落结构：按照趋势分段：bus, bike, foot 一段，car 一段

Main features: 四种交通方式的头尾数据要写。Bus 的 1980 年的拐点数据要写。

Comparisons：bus, bike, foot 的趋势对比，大小对比。Car 的趋势和大小和其余三种的趋势对比。

语言：动态对比，大小和趋势比较。

这个题目在语言变换上要注意，不能直接使用题目中的 bus, car, bike, foot。要替换成合适的表达，例如 taking a bus, driving, biking, walking

具体写法，可以参考下面的范文：

The bar graph illustrates how the proportion of workers who traveled to and from their workplaces by four means of transport changed in a city of Europe in three years: 1960, 1980 and 2000.

Overall, the popularity of taking a bus, biking and walking diminished to varying degrees, whereas driving was much more favored, becoming the most popular mode of transport in the end.

In 1960, the percentage of workers walking to work was the highest: about 34% and this figure dropped significantly to roughly 9% in 2000. The figure for cyclists experienced a similar downward trend, decreasing from 25% to just over 5%, the lowest in 2000. The share of bus commuters rose from approximately 17% in 1960 to about 26% in 1980 before falling to around 16% in 2000.

On the other hand, the usage of personal vehicles saw a dramatic increase. In 1960, only about 6% of people drove to work. However, in the following years, the proportion of motorists grew rapidly, reaching nearly 36% in 2000, which was far higher than the statistics for other modes of transport.
